

New Company Raises the Bar On Date Driven Technology Which Enables You To Communicate Even After You Die

ShareMyLife Inc. has launched their website Virtual LockBox www.vlockbox.com. Anyone can now connect with others into the future. Virtual LockBox's messaging capability is an enhancement of date driven technology and time release coding. Its' date driven technology enables users to connect the past to the present and the present to the future.

(FV Newswire) December 30, 2009 -- ShareMyLife Inc. has launched their website Virtual LockBox www.vlockbox.com

Anyone can now connect with others into the future. "We've created a system that allows you to securely save audio, videos, photos, letters, documents and send them to someone in the future" says Sanjay Maharaj, the President and CEO of ShareMyLife Inc.

Virtual LockBox's messaging capability is an enhancement of date driven technology and time release coding. Its' date driven technology enables users to connect the past to the present and the present to the future. Everyone has a story to tell and everyone wants to be remembered

"We wanted technology to connect and enhance human relationships," adds Maharaj. By connecting the present to the future, Virtual LockBox enables users to impact and add value to the future of those they care about in total privacy in today's world of transparency. A young mother dying of cancer can now send messages of love and encouragement to her children at various dates of her choosing after she passes.

In today's real time web everything is shared with everybody online chasing thousands of "friends" on Twitter and Facebook, but what about the most important people in our lives?: our wives, our husbands, our children, our family, and our best friends? Virtual LockBox has created a place to share with them forever and in private.

Whereas Outlook's date driven technology reminds users of meetings and to-do lists, Virtual LockBox has raised the bar by incorporating date driven technology reminding people how important they are to each other.

Virtual LockBox offers a high encryption and security level for contents stored in their database and it's safe, secure and reliable.

About Virtual LockBox

Virtual LockBox by ShareMyLife Inc. is a safe, simple and reliable place to store and share memorabilia online. Similar to a bank vault, Virtual LockBox allows users to upload and store images, video, audio and document files in a secure virtual vault for delivery to a specified recipient. By enabling users to send messages that will be received into the future, Virtual LockBox facilitates our need to be remembered and to remember those we love beyond life in this world.
